ABOUT ME

IT engineer with experience in Java backend development, full-stack web technologies, and cloud-based application deployment. Skilled in building web systems using Spring Boot, React, and modern development tools, with knowledge of database design, RESTful APIs, and network fundamentals. Cisco and AWS-certified with strong knowledge of cloud technologies, networking fundamentals, and modern web application development.

EDUCATION

2014 - 2023	Bachelor of Engineering (IT Engineering)
Technological University, Hmawbi, Yangon	GPA: 4.33 (Max. possible 5.00)

SKILLS

- Java backend development using Spring Boot
- RESTful API development and CRUD system implementation
- Database design and SQL development using PostgreSQL / MySQL
- Full-stack web development using HTML, CSS, JavaScript, React, and Next.js
- Cloud and deployment experience with AWS Amplify, Firebase Hosting, and Netlify
- Version control and collaborative development using Git and GitHub
- Unit testing and debugging using JUnit and defect tracking
- Network fundamentals including IP routing, subnetting, OSPF, IS-IS, and BGP
- System design documentation and technical specification preparation

LANGUAGE

- English - Business Level
- Japanese - Business Level

CERTIFICATES

- AWS Certified Cloud Practitioner
- AWS Certified AI Practitioner
- IBM Java Developer Professional Certificate (IBM Certified)
- IBM Full Stack Software Developer Professional Certificate (IBM Certified)
- Networking Basics (Cisco Certified)
- Well-Architected Proficient (AWS Certified)
- Google Advanced Data Analytics Professional Certificate (Google Certified)
- IBM Data Analyst | Data Science | Data Engineering Professional Certificate (IBM Certified)

EXPERIENCE

May,2024 - Apr,2026

Fixie Co.,Ltd.
(System
development,
System operation,
maintenance, and
monitoring, System
engineering
services)

Permanent - Java Engineer

- Completed comprehensive internal training covering IT fundamentals, software development, and professional workplace skills. Participated in courses on ITIL practices, reporting and communication, information security, Microsoft Office tools, business etiquette, telephone communication, and daily work reporting.
- Received technical training in Java, RDBMS, and SQL through structured learning and practical exercises. Studied core Java concepts including object-oriented programming, standard APIs, Stream processing, and file handling. Completed hands-on database design exercises involving table design, DDL/DML operations, SQL joins, and function-based queries.
- Developed a small-scale web application using Spring Boot, implementing login, list display, and registration features across three screens. Configured development environments, implemented backend components (Controller, Service, Repository, Entity), and developed CRUD operations connecting client requests to the database.
- Participated in collaborative development using Git and GitHub, creating feature branches, committing code, and addressing review feedback through pull requests. Designed and executed unit test specifications, preparing around 50 test cases and documenting evidence while resolving defects through issue tracking and retesting.
- Contributed to the enhancement of a meeting room reservation system by adding equipment reservation features including item listing, registration, search, booking, and cancellation. Updated the application architecture from Web MVC (MPA) to a SPA structure and implemented backend logic based on the system design.
- Developed an online shopping POS system with five main modules: purchasing, sales, ordering, delivery, and profit management, using an MVC architecture integrated with a MySQL database. Set up the development environment, configured the database, and prepared basic design documentation including screen layouts, database schemas, and process flows. Implemented system features using a three-layer MVC structure (Controller, Service, Model) and developed CRUD operations for database interaction. Conducted functional testing through the web interface, verified system behavior, documented defects, and performed fixes and re-testing to ensure system stability.
- Further expanded full-stack development skills through projects using HTML, CSS, JavaScript, React, and Next.js. Built several web applications including a portfolio website, a workout planner with state management, an e-commerce store with Stripe payment integration, and a subscription management system using Firebase Authentication and Firestore. Deployed applications using AWS Amplify, Firebase Hosting, and Netlify while managing source code through GitHub.
- Developed a full-featured hotel management system consisting of an internal admin dashboard and a customer-facing booking platform for a hotel with eight luxury cabins, implementing core functionalities including cabin management, booking management, guest tracking, and check-in/check-out workflows integrated with a real-time Supabase database. Built secure authentication and protected route systems for staff and customer access control, while developing responsive user interfaces using React, Vite, Next.js, and Tailwind CSS. Managed application and remote state using React Context API and React Query, implemented form validation with React Hook Form, integrated utilities such as date-fns, React Hot Toast, and Recharts, and configured deployment workflows through Vercel with Supabase services for database, authentication, and backend API integration.
- Developed a full-stack E-Commerce web application simulating a real-world production environment with secure authentication, payment processing, and cloud deployment, designing and implementing RESTful APIs using Spring Boot, Spring Data JPA, and PostgreSQL for product, cart, order, and user management. Implemented JWT-based authentication and role-based authorization using Spring Security for Admin and User functionalities, while building a responsive frontend using React and Vite with integrated product browsing, shopping cart, and order management features. Integrated Stripe API for secure payment processing and configured deployment environments using Docker, deploying backend services to Render, PostgreSQL database on Neon, and frontend hosting through Netlify.

EXPERIENCE

Dec, 2020 – Mar, 2021

Ooredoo Myanmar
Limited
(Telecommunications)

Internship – IP Routing

- Participated in technical training programs provided by Ooredoo and ZTE team, focusing on the importance of RAN transport planning in telecommunications networks. Through these training courses, gained knowledge of transport networks, transport technologies, and IP networking fundamentals. Studied key IP networking concepts including IP routing, IP subnetting, and routing protocols such as OSPF, IS-IS, and BGP.
- During the apprenticeship program, was assigned to the patching project phase and responsible for preparing High Level Design (HLD) documentation. Conducted network planning work for 24 sites in the northern region with the objective of reducing IDU router utilization. Developed and documented network design proposals as part of the project deliverables.

Aug, 2020 – Nov, 2020

Myanmar Economic
Corporation
(Telecommunications)

Internship – Junior Engineer

- During the internship program, gained fundamental knowledge of mobile telecommunications systems and infrastructure. Studied the basic concepts of CDMA (Code Division Multiple Access) technology, including bandwidth, frequency usage, and network architecture. Learned how CDMA networks such as MEC's MECTel operated in Myanmar, providing voice and data services using the 800 MHz frequency band. Also developed an understanding of telecommunications infrastructure including base stations, transmission networks, and fiber connectivity that support mobile communication services.
